Computers

We are four young, and very beautiful boys, our names are Haukur, Hrafn, Óli and Sindri. This is our first course in entrepreneurship. We have been visiting companies to see and learn how everything is done. We have also been doing projects where we are "creating" our own. It's gone something like this:

1. We made a list of ideas
2. We removed the ideas we didn't like
3. We then chose few of the ideas left
4. And finally, we chose the idea we liked best.

We are working on this one idea now, making a business plan for it. Our final idea was to make a company that makes homepages and web systems for both companies and persons. In that business plan, we are describing our idea and talking about the good things and the bad things about it.

Our project is in three parts, and we are currently working on the third part and the last. The first part we were describing all the ideas we had and the first part also include choosing the final idea. In the second part we started our business plan, and in the business plan we are like we said before describing the idea. In the third part, which we are currently working on now, we are going to finish our business idea and then make a presentation about the whole project for our class.

The reason we chose the idea to make a company that makes homepages and web systems for companies and persons was because we are all very interested in that kind of business and we would say that we have the knowledge to start that business. Also, because like everyone knows; computers and the internet are a big part of our life and will just go from strength to strength.

Greetings.

Haukur Halldórsson
Hrafn Eiríksson
Ólafur Ingi Guðmundsson.
Sindri Snær Þorsteinsson
