

National Park of Isojärvi

Isojärvi National Park is a small wilderness-like area, where forest and lake landscapes alternate. There are long narrow lakes and rift valleys, formed in faults in the bedrock, which makes the terrain difficult at some places. The core part of the National Park is the continuous land area on the southern side of Lake Isojärvi. In addition, the park includes more than 20 islands, and fragmented land areas on the northern side of the lake.

Isojärvi National Park is an ideal destination for a hiker looking for peaceful forest and lake landscapes.
